

SOLUTIONS

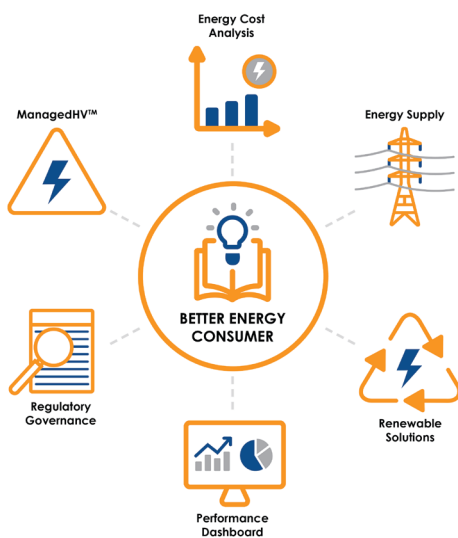

OEA helps customers maximize the way they buy and use energy, with sophisticated modeling and increased efficiencies. Our analytics experts interpret unique data profiles, helping our customers make effective decisions that impact their bottom line. Our process captures market savings, and our energy management scope navigates a path of opportunities to help reduce and avoid unnecessary costs.

We have assembled a team of experts in energy technology and analytics; by providing better analytics, we can ultimately provide better-customized energy solutions. Our services include:

- Retail energy advice (including electric and natural gas supply, delivery, and supply audits)
- Renewable and ESG (Even sophisticated energy consumers lack the time to do all the research required to make the best decision for their renewable and ESG goals. Our energy management scope navigates a path to ease complexity within renewable and ESG company targets)
- Regulatory guidance (including tariff analysis, Peak Load Contribution management, and education)
- Data visualization, personalized company dashboard
- Technical energy consulting (including site selection, utility transmission line extensions, distribution line relocation, infrastructure correction, and backup generation, and substation design oversight)
- Reasonable arrangement management
